Benefits of Choosing VadaTech

- Xilinx UltraScale™ XCKU115 FPGA provides strong connectivity and processing power
- Dual FMC sites with broad choice of compatible network, A/D, D/A and RF FMCs
- Dual Banks of DDR4 memory allow larger buffer sizes while processing and queuing data to the host
- Electrical, mechanical, software, and system-level expertise in house
- Full system supply from industry leader
- AS9100 and ISO9001 certified company

The AMC593 provides a very capable I/O processing engine, with a large UltraScale™ FPGA coupled to two FMC sites and supported by an on-board quad-core processor. With over 5,500 DSP slices and supported by 8 GB of DDR4 (32-bits wide over two banks), the XCKU115 connects to all FMC LA/HA/HB pairs, balancing high-speed I/O with impressive processing power. The AMC593 is compliant to the AMC.1, AMC.2 and/or AMC.4 specification, and supports direct AMC-to-AMC connections over ports 12-15 and 17-20.

The dual FMC sites accept FMCs from VadaTech's extensive range of data acquisition, networking and RF units, and other 3rd party VITA-57 compliant modules.

The quad core P2040 on-board host has 4x PCIe interface to the FPGA in addition to its local bus, and is supported by DDR3, Boot Flash and a SD Card. The user can select whether to route ports 0 and 1 of the AMC to the PPC or FPGA.

The AMC593 has Serial over LAN (SOL) per IPMI specification, with a hardware RNG for secure session.

REFERENCE DESIGN

VadaTech provides a reference design implementation for our FPGAs complete with VHDL source code and configuration binaries. The reference design focuses on the I/O ring of the FPGA to demonstrate low-level operation of the interconnections between the FPGA and other circuits on the board and/or backplane. It is geared to prove out the hardware for engineering/factory diagnostics and customer acceptance of the hardware, but it does not strive to implement a particular end application.
